

Field Trip to National Association for the blind- ESO students share their experience

Our trip to the National association for the blind at Madhavaram,introduced us to many of the low vision and blind people who are taught and motivated to live independently by orientation and mobility training. Based on the person's interest they are given music and computer training. Most crucial fact is that the training aims at making people earn for their living. The main thing that shocked us was that the person who is giving training is also a low vision person.People there were so generous and happy to explain us about different types of training.This trip made us to know how well a low vision person or blind can perform his task so easily because of training and how their life can be changed.We came to know the responsibility of low vision care professional towards his/her patient in guiding to these kind of centres so that their life can be changed.This trip was informative and useful for all of us.We all would like to thank Ms. Sarika , Optometrist for guiding us in the field trip and clearing all our doubts,and Dr.R. Krishna Kumar, Principal, who arranged for the trip,and all who have done needful to make this trip successful.....
